Hertfordshire, HP4 | (+44)780 681 2234 | kaneadams.dev@gmail.com | <https://www.linkedin.com/in/kane-adams> | <https://kaneadams-dev.github.io> | <https://github.com/KaneAdams-Dev>

Summary

Software Developer with experience building interactive systems, gameplay logic, and tools using C# and modern engines. Experienced working across academic, indie, and commercial projects, collaborating in version-controlled environments, and shipping public demos. Strong focus on modular design, problem-solving, and rapid iteration across multidisciplinary teams.

Experience

Septagram Games LTD

Lead Programmer/Co-director

October 2022 – Present

Remote

- Led programming across two projects, Mobbers and Mobberville: developing gameplay systems, AI behaviours, and procedural content in Unity and Unreal Engine.
- Designed modular player, enemy, and item systems to support rapid iteration and designer-driven workflows.
- Collaborated within a multidisciplinary team of up to 10 developers, managing GitHub workflows and version control.
- Shipped and presented public demos, including a Steam demo with 400+ wishlists.

Code Ninjas

Code Sensei Club Tutor

September 2021 – June 2023, July 2025 – Present

Cheltenham, Hemel Hempstead

- Delivered programming and game development instruction to children aged 5-15 across multiple languages and engines.
- Mentored advanced students in Unity and C#, supporting debugging, problem-solving, and project development.
- Supported workshops, holiday camps, and special projects.

Skills

Languages: C#, C++, Python, JavaScript, TypeScript, Lua, ShaderLab (HLSL), HTML, CSS, Visual Scripting

Engines and Platforms: Unity, Unreal Engine, .NET, WebGL, Steamworks SDK, ML-Agents, OpenXR, Itch.io

Systems and Logic: Gameplay Systems, UI/UX Integration, Input Handling, AI Behaviours, Physics, Procedural Generation, Serialisation (JSON/Binary)

Tools: Git, GitHub, Visual Studio, Unity Profiler, Unity URP, Blender, HacknPlan, Trello, TensorBoard, Tobii SDK

Practices: Object-Oriented Programming (OOP), Modular Architecture, Data-Driven Design, Event-Driven Systems, Debugging, Optimisation, Performance Profiling, Testing, Version Control, Documentation, Agile Methodologies

Education

University of Gloucestershire, Game Technologies

MSc Games Development

September 2022 – November 2023

Merit

Relevant Modules: Individual Commercial Project, Collaborative Project, Procedural Content Generation, Machine Learning and Data Analytics

University of Gloucestershire, Game Technologies

BSc (Hons) Computer Games Programming

September 2018 – November 2022

2:1

Relevant Modules: Game Engine Programming, Advanced AI Algorithms, Graphics Programming with Shaders, Tools Programming, Programming Low and High-Level Architecture, Network Programming for Games, Advanced Group Project

Placement Year: Coloured Perception – Unity Programmer, co-developed an eye-tracking art game; presented at COMX 2021

Achievements

Brackeys Game Jam 2025.2

August 2025

- Ranked Top 15% overall (out of 2,302 entries), including Top 3% in innovation and theme, for Crumbling Colony.
- Deliberately swapped roles with the team artist, producing low-poly 3D assets in Blender and supporting rapid prototyping of an RTS vertical slice.

Zombeez Game Jam by Fan Studio

June 2024

- Ranked 16th in Fun Factor and 25th in Creativity for Survivor Horde, a Unity-built side-scrolling survival shooter.
- Implemented core gameplay systems including wave-based AI, multiple survivor and enemy types, boss encounters, and weapon systems; delivered a WebGL build within a two-week jam.

Exhibitions and Showcases

Insomnia Gaming Festival (i70)

April 2023

Showcased Mobbers as part of MSc Games Development degree, presenting a playable demo and engaging with attendees over a full exhibition period.

Insomnia Gaming Festival (i71)

September 2023

Invited back by organisers following strong reception at i70; presented Mobbers to the public and industry attendees. Featured as a runner-up in Patch Magazine's indie coverage.

Cheltenham Science Festival

June 2023

Represented the University of Gloucestershire, presenting Mobbers and engaging the public in discussions around game development and design.

COMX Showcase, University of Gloucestershire

June 2021, 2022, 2023

Presented projects across three consecutive years: Art is Opinion (2021), Tales of Rambleon (2022), and Mobbers (2023).

Projects

Personal Portfolio Website

Ongoing

Design and developed a responsive portfolio site using HTML, CSS, and JavaScript to showcase projects, playable builds, and technical decisions.

Unity ML-Agents

January 2023 – May 2023

Implemented and trained an AI agent using reinforcement learning to navigate toward a target while avoiding obstacles, developed in Unity using the ML-Agents framework.

Terrain Generation

September 2022 – December 2022

Built procedural terrain systems using layered Perlin noise and Poisson Disc Sampling to generate and populate environments in Unity.

Tales of Rambleon

January 2022 – June 2022

Programmed gameplay systems for a Metroidvania-style game in Unity as part of a team-based final-year project.

Puzzled Gaze

April 2022 – May 2022

Developed experimental minigames using eye-tracking input in Unity as part of an independent research project.

Art is Opinion

January 2020 – August 2021

Created an interactive art and painting experience using eye-tracking for accessibility during a self-directed placement year.

Hobbies and Interests

Interests include interactive systems, problem-solving, and creative technology. Regular participation in tabletop role-playing games has strengthened skills in systems thinking, balance, and collaborative storytelling, with concepts often informing design and prototyping work. Additional interests include emerging technologies such as eye-tracking and virtual reality, alongside rapid prototyping and experimentation under tight deadlines through collaborative and solo projects.
